PROVED SIRE LIST
1960

AYRSHIRE AND GUERNSEY SIRES

Agricultural Research Service
U. S. Department of Agriculture

DHIA PROVED-SIRE LIST

This DHIA Proved-Sire List contains proved-sire record summary information for 1,247 Ayrshire and 5,036 Guernsey sires. These summaries are for sires proved or reproved from data received in the Dairy Cattle Research Branch, AHRD, ARS, prior to October 1, 1959.

In 1959, the Branch changed its manual punch card system of compiling proved-sire records and related data to the 705-III magnetic tape electronic data processing procedures. These new procedures made it possible to include new items in the proved-sire record tabulations, such as contemporary and yearly herd-average comparisons and summaries of artificial breeding (AB) progeny and non-AB progeny comparisons.

All production records used in proved-sire records consist of 305-day lactation records standardized to a mature equivalent twice-a-day milking basis. When more than one lactation record is available for a cow, each record is standardized and the average of all standardized records is used to represent the producing capacity of the cow.

Compilations of contemporary and yearly herd-average data are dependent on herd codes to assemble such data for each sire. Because a uniform system of identifying DHIA herds by code has been in operation only a relatively short time, lactation records and herd-average data reported in earlier years are not identified by herd codes. Proved-sire records for the older sires listed, therefore, may include little or no contemporary and yearly herd average data.

A proved-sire record is tabulated for a sire when 5 or more of his daughters have lactation records reported, together with lactation records for their dams. A proved-sire record is retabulated (reproved) when 50 percent additional dam-daughter comparisons are reported.

EXPLANATION OF LISTED PROVED-SIRE RECORD SUMMARIES

Summary data for the Ayrshire sire 69906, Glengarry Britain Imp., listed on page 12 are, as follows:

69906	GLENGARRY BRITAIN, IMF.....	257	9735	4.1	399	14	9704	403	5	9756	412
10-15-39	64582 298490 72 NON-AB DAU	176	9613	4.1	395	14	9704	403	5	9756	412
LISTED-08-49	53 PAIRED NON-AB DAU	73	1	18							
STATES-14,21,32,42,48	DIFF. 53 PAIRS 0033-0031-0035						31	4-		21-	13-

To explain the sire summary above: Line 1 lists the registration number and name of the sire. Beginning at the left, line 2 lists the birth date of the sire; the registration number of his sire; and the registration number of his dam. (Birthdates and registration numbers for sires and dams of proved sires are not available for first proofs -- To illustrate: See Sire No. 70020 listed on page 12.) Pedigree information for each proved sire is obtained from the Breed Registry organization after the sire is proved the first time. This pedigree information is then included in the next DHIA Sire List issued.

"Listed 08-49" (line 3) indicates that the sire has been previously proved and his last proof summary was listed in the August, 1949, DHI Letter.

"States 14, 21, 32, 42, 48" (line 4) indicates the sire was proved with data from 5 States coded 14, 21, 32, 42, and 48 (Massachusetts, New York, Indiana, Iowa, and Kansas). A list of State codes is given on page 3.

This proved-sire tabulation includes the records of 72 non-AB daughters of the sire, with a total of 257 lactation records. Usable lactation records were reported for dams of 53 of the 72 non-AB daughters. Comparing the production records of the daughters with the production records of their dams showed, "53 pairs 0033-0031-0035", which means 33 of the 53 daughters excelled their dams in milk production, 31 excelled in percent butterfat test and 35 excelled in butterfat production. The 53 daughters collectively had a total of 176 lactation records that when averaged showed 9,613 pounds of milk containing 395 pounds of butterfat testing 4.1 percent fat. On the average, the daughters excelled their dams in milk production by 70 pounds, in butterfat production by 18 pounds and in percent butterfat test by .1 percent.

Data at the right give the production level of contemporary daughters or stallmates of the daughters -- also the yearly herd-average of the herd in which the record was made.

In this sire record the daughters have 14 parentally unrelated contemporaries or stallmates, averaging 9,704 pounds of milk and 403 pounds of butterfat.

The comparison between daughters and contemporaries is based on the average production of all daughters (in this case 257 daughters) and the contemporaries of the 257 daughters (in this case 14 daughters) which, in this record, are the contemporaries of the daughters whose records were also included in the paired production data. In this sire record the daughters excelled their contemporaries by 31 pounds of milk, but failed to equal them in butterfat production by 4 pounds. The herd average data are based on the yearly herd averages available that were made concurrently with the lactation records. Yearly herd averages have been increased by 9 percent that they may be more comparable to the standardized lactation average data included in the herd.

NOTE: As most of the contemporaries of daughters of older sires are not identified by herd codes, contemporary and yearly herd-averages for most sires in this list, therefore, do not include a sufficient number of records to provide reliable averages for comparison purposes. In future tabulations, the electronic data processing procedures are programmed to pick up herd-code information from currently reported records for use with previously reported records of cows now in the master file without herd codes. Future proved-sire records should, therefore, contain considerably more contemporary and herd average information than is contained in the proved-sire records in this list.

The proved-sire record summary for the Ayrshire sire 69998, Whitpain King Arthur, also listed on page 12, is as follows:

69998	WHITPAIN KING ARTHUR.....	177	8093	4.3	399	5	8645	346	2	8707	346
03-25-42	42060 134802 79 AB DAUGHTERS	156	8248	4.2	395	5	8645	346	2	8707	346
LISTED-08-57	AB STUD-48-01 67 PAIRED AB DAU	122-	2	13							
STATES-35,42,45,46,47,48,73	DIFF. 67 PAIRS 0036-0041-0039	162	9516	4.3	411		448	49		386	43
74,84	43 NON-AB DAU	134	8429	4.3	409						
	37 PAIRED NON-AB DAU	348	2	46							
	DIFF. 37 PAIRS 0023-0033-0027										

The above summary includes data for both AB and non-AB progeny. At the left, in addition to the data explained in the record for sire No. 69906, the AB stud in which the sire was located is indicated as "AB Stud 48-01". The "48" indicates the State and the "01" indicates the stud within the State. On pages 2 and 3 are listed the studs by State with their respective code numbers.

This sire had 79 AB progeny reported with records, 67 of which also had dams reported with records. The explanation of the daughters' production data, the paired records, and also the contemporary and yearly herd data are similar to that given for the record of sire No. 69906.

Using the Proved-Sire Record

Proved-sire records as summarized in this list should be considered merely as an indication and not as conclusive evidence of the breeding value of the sire in question. In general, however, the greater the number of dam-and-daughter comparisons included in the proved-sire record the more reliable the record as an indication of the breeding value of the sire. Also, the greater the number of lactation records included in the average record of each dam and daughter, the more dependable the proved-sire record.

If a proved-sire summary of non-AB progeny consists of less than 10 comparisons, the sire proof should be considered as a preliminary proof. Additional comparisons may significantly change the sire summary.

If a proved-sire summary of AB progeny consists of less than 25 comparisons, the sire proof should be considered as a preliminary proof. Additional comparisons may significantly change the sire summary.

To make the most intelligent selection of a sire, the dairyman should use these proved-sire records to single out the most promising sire and then make every effort to supplement these data with additional information gathered from the herds in which the dams and daughters made their records. Particular attention should be given to the feeding practices and environmental conditions under which the records were made, in order to be assured that the records of the daughters were not made under more favorable conditions than those of the dams, or vice versa. It is especially important to determine that there has been no selection of daughters in making the comparisons.

ARTIFICIAL-BREEDING ORGANIZATIONS IN THE UNITED STATES

DHIA Proved-Sire Records, of sires in AB Service, indicate by code number the last AB organization in which a sire is used. Following is a complete list of AB organizations that have operated in the United States (according to reports received in the Dairy Cattle Research Branch). Some no longer exist, but sires used in such organizations may be proved or reproved, in which case reference will be made to the organization in the proved-sire record.
